

CVS

Controls Ltd.

INSTRUCTION MANUAL

CVS Controls Series 627 Pressure Regulator

The CVS Series 627 regulator is a high and low pressure, direct operated pressure reducing regulator. Suitable for use in many applications, including air, natural gas and other fuel gas sources.

CVS Series 627 Regulators are easy to maintain, reducing cost of ownership and valuable downtime. Internal components may be replaced without the need to remove the regulator from the applications installation. The two bolt design between the body and diaphragm case allows for simple removal to do maintenance or repairs.

The diaphragm case and or the regulator body may be rotated in any of four positions to allow for versatile installation options.

The adjustment set screw and lock nut come standard with a protective cap to discourage unwanted adjustments of the desired pressure output.

Three configurations available:

CVS 627 - Direct Operated Pressure
Reducing

CVS627R – Internal relief

CVS627H – High Pressure

All are sour or NACE capable.

Specifications:

Body Size (in)	End Connection	Standard Construction
1 and 2	NPT	LCC Steel

Note: The pressure limits specified in this manual should not be exceeded

Maximum Inlet Pressure (body)

NPT Steel: 2000 psig

Ductile Iron: 1000 psig

Maximum Outlet Pressure (operating)

Determined by spring selection and orifice size. See Table 1

Maximum Spring and Diaphragm Casing Pressure

See Table 2

Note: The CVS 627 is limited by the maximum diaphragm casing pressure

Orifice Sizes

See Table 1

Regulator Capacities

See Table 3

Flow Coefficients

See Table 4

Temperature Capabilities

Material	Disk/Diaphragm	Temperature	
		C°	F°
Nitrile (NBR)	Disk/Diaphragm	-40 to 82	-40 to 180
Nylon (PA)	Disk		
Neoprene (CR)	Diaphragm		

Construction Materials:

Body:

Ductile Steel Standard

LCC- Optional for

Sour or NACE service.

Spring Case and Diaphragm Case:

LCC Steel

Orifice:

Standard is Aluminum.

Stainless Steel, optional

Disk Holder with Valve Disk:

2000 psig: Aluminum or Stainless Steel with Nylon (PA)

1000 psig: Aluminum (standard), or Stainless Steel (optional) with Nitrile (NBR)

O-Rings:

Nitrile (NBR)

Diaphragm:

Neoprene (CR)

Pressure Registration:

Internal

Spring Case Vent Connection:

3/4" NPT with screened vent removed

Approximate Shipping Weight:

LCC Steel – 10 lbs

Installation:

Note: Do not exceed the pressure and temperature limits referenced in this manual. Ensure proper safety procedures are followed when installing or maintenance is required. Only qualified personnel should install, operate and maintain this component.

1. If the CVS 627 regulator has been shipped as an individual component, inspect for debris or foreign materials upon un-packaging.
2. Ensure all piping and tubing connections are free of debris and have been blown free.
3. The 627 Regulator may be installed in any direction, as long as the flow direction is adhered to as marked on the body.
4. A three-way valve may be utilized should continued operation be required during inspection and maintenance procedures. (not supplied)
5. Position the body and diaphragm spring case in a manner that prevents the screened vent from collecting debris or moisture.

Note: This regulator may ventilate some gas to atmosphere. If installed in a hazardous or flammable gas application, ensure proper venting procedures are followed. Vent the regulator to a safe location away from any hazardous area. Keep the vent line clear of debris and or condensation.

Remote Venting Installation:

The CVS Series 627 Regulator comes standard with a screened vent installed in the 3/4" NPT spring case vent. When necessary to remotely vent the regulator the screened vent may be removed to install a remote vent line.

Always ensure the remote vent line is installed using proper piping procedures. Keep the vent line free of debris and or any condensation, and periodically inspect the vent line for proper regulator operation.

Overpressure Protection:

The outlet pressure rating on the Series 627 Regulator is lower than the inlet pressure rating. If the inlet pressure exceeds the outlet pressure on the CVS 627H, a pressure limiting or pressure relieving device must be installed as there is no internal relief. Internal damage may occur if this step is not followed.

Startup and Adjustments:

The CVS Series 627 Regulator is set to the midpoint of the spring range upon assembly, unless otherwise specified by the customer. Initial adjustments may be required at point of installation to suit the application.

During startup, release downstream pressure to prevent an overpressure condition. It is recommended pressure gauges be utilized to monitor pressures during startup.

1. Open upstream shutoff valve slowly.
2. Open downstream shutoff valve slowly.
3. Inspect all connections for leaks.
4. Should any final control spring adjustments be needed refer to the Adjustment portion of this manual.

Adjustments:

1. Remove the Adjustment Screw Cap.
2. Loosen the Adjustment Screw Lock Nut.
3. It is recommended a pressure gauge be used when making final adjustments to the regulator.
4. To increase the CVS 627 Regulator outlet pressure, turn the adjustment screw clockwise. To decrease the outlet pressure, turn the adjustment screw counter clockwise.
5. Once the final pressure has been achieved, while holding the adjustment screw, tighten the adjustment screw locknut.
6. Replace the adjustment screw cap that was removed in step 1.

Shutdown and Maintenance:

Shutdown:

Avoid an overpressure condition on the regulator by first releasing downstream pressure to avoid equipment damage or personal injury.

1. Close upstream shut off valve.
2. Close downstream shut off valve.
3. Vent line between the regulator installation and the closest downstream shut off valve.
4. The CVS 627H Regulator will open to release the pressure between the upstream shut off valve and the regulator.

Maintenance:

Always follow proper shutdown procedures prior to performing any maintenance. Isolate the regulator from all system pressure to avoid personal injury and/or equipment damage.

Periodic inspections of the CVS 627 regulator are recommended, and field maintenance may be required should the inspection reveal damaged or worn parts due to normal operation, or damage from external sources. Severe operating conditions may require more frequent inspections.

Common items to inspect for wear or damage include the orifice, disk assembly, diaphragm, and o-rings. These procedures may also be used to inspect and replace other regulator items as required.

Body Maintenance:

*The following procedures refer to the CVS 627H, for CVS 627 and CVS 627R refer to assembly drawings for correct item identification.

The following procedures may be used to access the disk assembly, orifice, stem assembly and diaphragm casing o-ring. Ensure all pressure has been released from the diaphragm casing prior to performing the following procedures.

Replace the Orifice or Disk Assembly: (Key #12, and Key #14)

1. Using a 5/16 hex wrench, remove the two cap screws (key 13), and separate the body from the diaphragm casing.
2. Inspect orifice (Key 12) for visible damage and remove/replace if necessary using a 7/8 socket wrench. If the orifice has been removed, lubricate the threads before replacing and torque to 25 ft/lbs.

3. Inspect the disk assembly (Key 14). If replacement is necessary, the disk assembly may be removed by using needle nose pliers to first remove the hair pin clip (Key 15).

Stem Assembly replacement if necessary: (Key 16)

1. Remove the Boost Body (key 11), Stabilizer (key 17), and Stem Guide (key 8) from the diaphragm case. The Stem (key 16) may be removed by unhooking it from the lever inside the diaphragm case.
2. Remove and inspect the diaphragm case o-ring (key 9), replace as required.

Maintenance:

Stem Assembly Replacement, continued:

3. Apply an o-ring lubricant to the diaphragm casing o-ring (key 9) prior to assembly.
4. When re-assembling, the pitot tube tab must be on the inside of the outlet side of the regulator body.
5. Lubricate the Stem (key 16) and insert into the diaphragm case, making sure to hook back onto the Lever (key 22).

6. Insert the Stem Guide (key 8) back into case by sliding over the Stem Assembly. Insert the Stabilizer (key 17) back onto the Stem Assembly. Slide the Boost Body (key 11) back into diaphragm case.

7. Install the Disk Assembly (key 14) by sliding it into the Stem Assembly and lining up the holes to install the Hair Pin Clip (key 15).

8. Reposition the Body back onto the Diaphragm Case in the correct position for the application. Install the Cap Screws (key 13) back on to secure the Body to the Diaphragm Case, torque to 25 ft/lbs.

Maintenance:

Spring Case and Diaphragm Maintenance:

The following procedures may be used to inspect and maintain the Diaphragm Assembly (key 28), Main Control Spring (key 34), and Lever Assembly (key 22). Remove spring pressure from the diaphragm case prior to performing the procedures.

1. Remove the Adjustment Screw Cap (key 35) and loosen the Lock Nut (key 2) using a 3/4 wrench. Turn the Adjusting Screw (key 1) counter clockwise to remove spring compression on the Control Spring (key 34) until it is loose.

2. Remove the 8 Spring Case Cap Screws (key 29) using a 9/16 wrench. The Spring Case (key 3) may now be lifted off the Diaphragm Case (key 5). If spring replacement or repositioning of the spring case is all that is necessary, do so accordingly and reassemble in reverse order. Torque Spring Case Cap Screws to 7 ft/lbs in a cross pattern till all have been installed and torqued.

Diaphragm area Maintenance:

1. Remove the Diaphragm Limiter o-ring (key 27) and the Diaphragm Limiter (key 7). Remove the Diaphragm Assembly (key 28) by tilting it so it will slide off the Lever (key 22)

Maintenance:

Diaphragm area maintenance continued:

1. The Lever Assembly (key 22) may be removed by using a 7/16 nut driver or similar if inspection reveals damage or wear. A new Lever (key 22) may be installed by first removing the Pin (key 21) to remove the old Lever, then install a new Lever and insert the Pin. The Lever Assembly may now be reinstalled by securing the two Lever Cap Screws (key 24) and torque to 7 ft/lbs.

Diaphragm Maintenance: (key 28)

1. If inspection reveals wear or damage to the diaphragm, it must be replaced. Remove the Diaphragm Head Screw (key 31) using a 1/2 wrench. Remove the 2 Pusher Post o-rings (key 26). Separate the Diaphragm (key 28).

2. Install the Diaphragm in the reverse order as listed above. Do not fully tighten the Diaphragm Head Screw.
3. The Diaphragm Assembly may be reinstalled and the Diaphragm must be aligned to the case holes prior to the Diaphragm Head Screw being fully tightened. Once aligned, remove the assembly from the lever once again and tighten the Head Screw to 14 ft/lbs.
4. Install the Diaphragm Assembly back into the Diaphragm Case by tilting in a manner so the Pusher Post properly sets into the Lever.

Maintenance:

Diaphragm Area Maintenance Reassembly:

1. The Diaphragm Limiter and Diaphragm Limiter o-ring may now be installed. Set the Diaphragm Limiter onto the Diaphragm; align so that the Spring Case Cap Screws may be installed. Set the Diaphragm Limiter o-ring back into the groove.

2. Install the Spring (key 34) and Upper Spring Seat (key 4) onto the Diaphragm Limiter (key 7).

3. Install the Spring Case (key 3), align the vent assembly in the correct position for the application.

4. Insert the Spring Case Cap Screws (key 29) and finger tighten. Screw in the Adjusting Screw (key 1) to put slack on the Diaphragm. Use a cross pattern to complete tightening of the Spring Case Cap Screws to 7 ft/lbs.

5. Make final adjustments as required, if necessary; refer to Startup and Adjustments section. Once final adjustments are complete, tighten the Adjustment Lock Nut and install the Adjustment Screw Cap.
